

HOW LONG CAN THEY GROW

Bruce from Boundry Dahlia's was digging his tubers (May 2014) and found some problems removing one plant from the ground.

The plant "Lynwood House" had produced tubers 700 millimetres long. They had grown through the clump of tubers next door. It took some time to untwine the clump

Below is a photo of two tubers of Lynwood House with a 9 litre bucket from one of our sponsors for prospective
